Esercizio sul funzionamento delle cache

M. Sonza Reorda

Politecnico di Torino Dip. di Automatica e Informatica

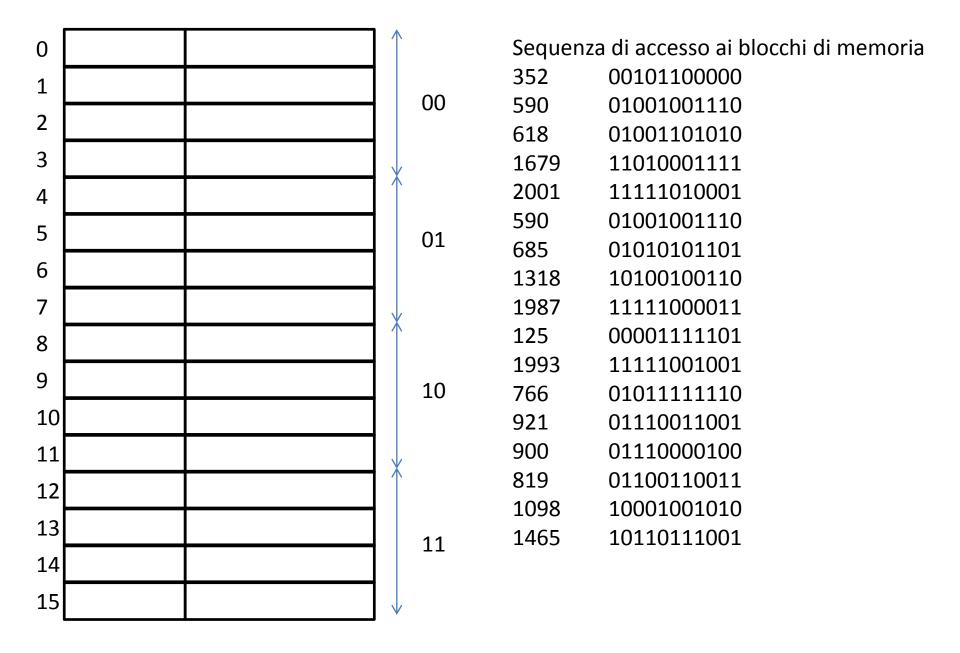

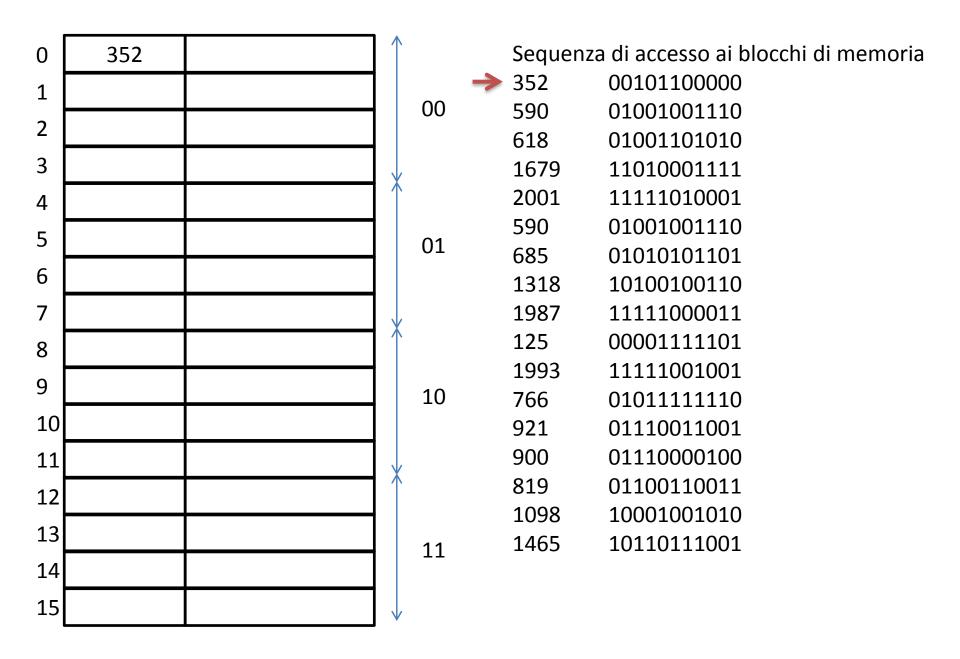

Ipotesi

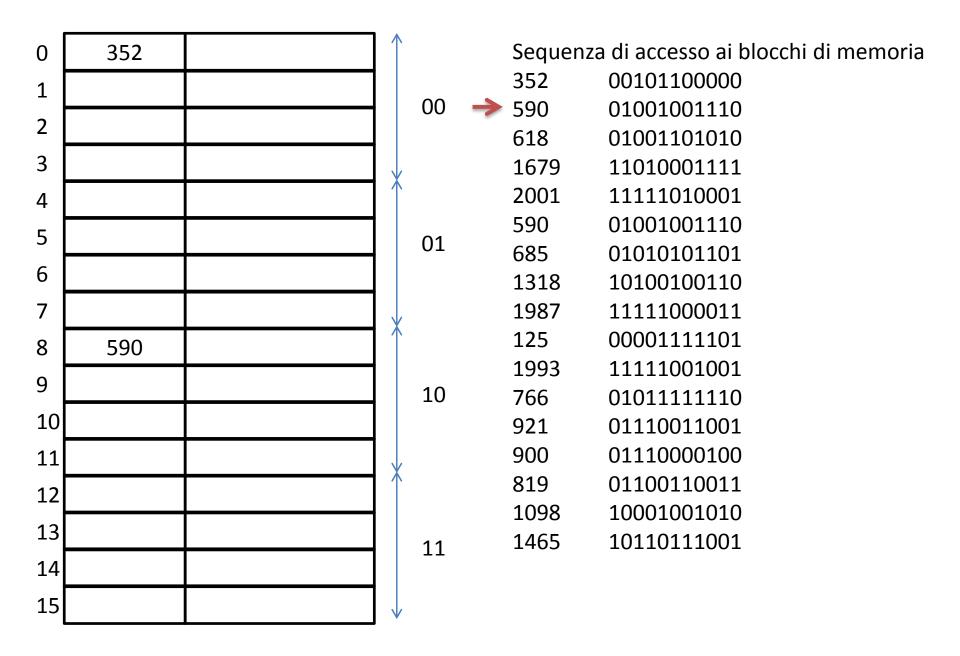

- Dimensioni della memoria: 2¹⁶ byte
- Struttura della cache
 - 16 linee
 - 1 linea: 32 byte
 - Mapping: set associative a 4 vie
 - Politica di rimpiazzamento: LRU
- Inizialmente
 - la cache è vuota
 - all'interno di ciascun insieme le linee vengono riempite nell'ordine dato dal loro indice

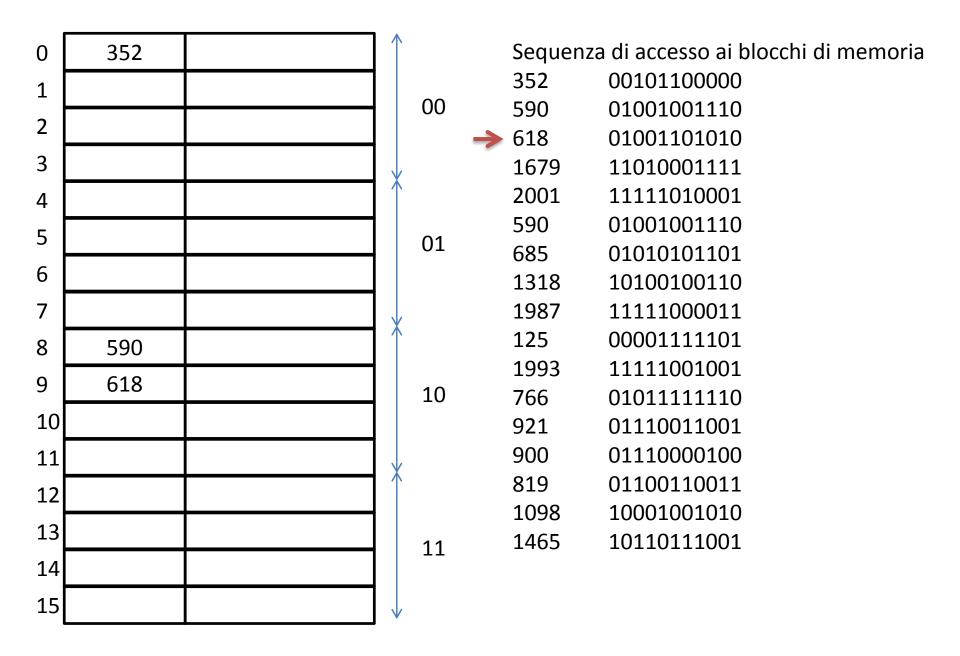

Problema

 Si determini il blocco presente in ciascuna linea della cache al termine della seguente sequenza di accessi alla memoria:

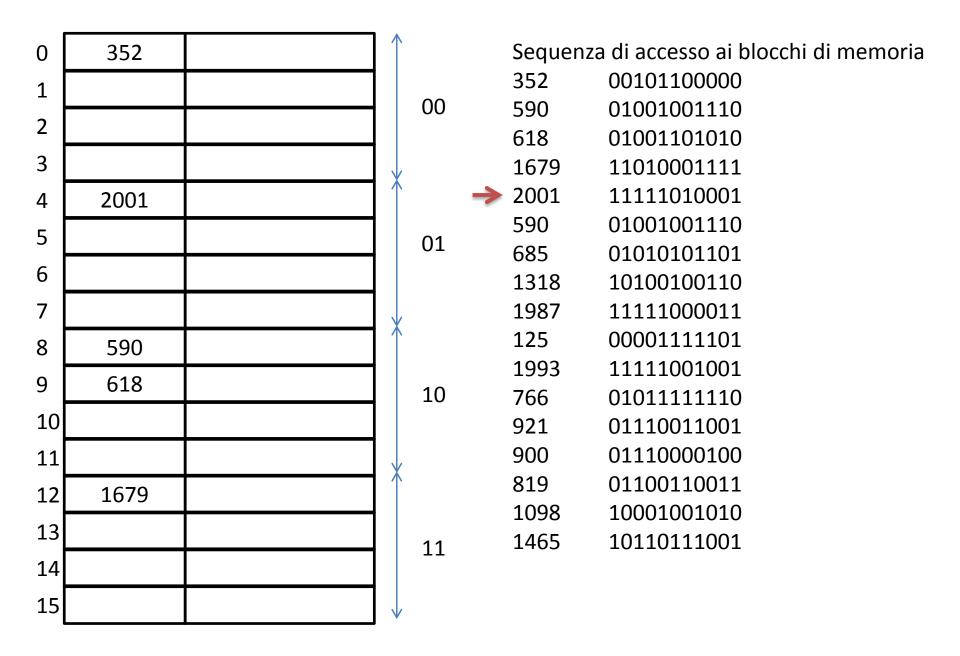

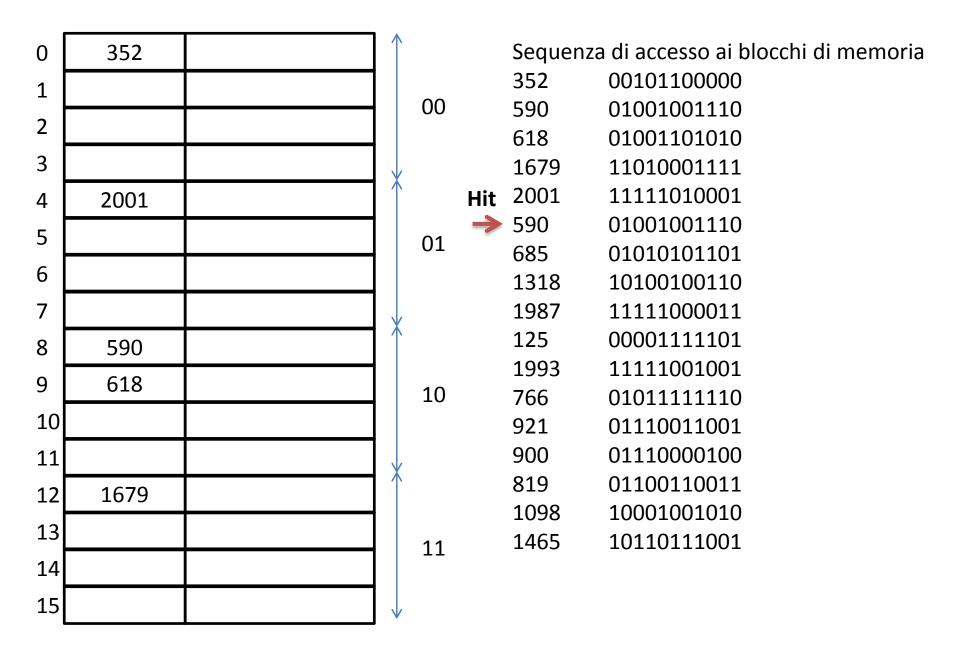

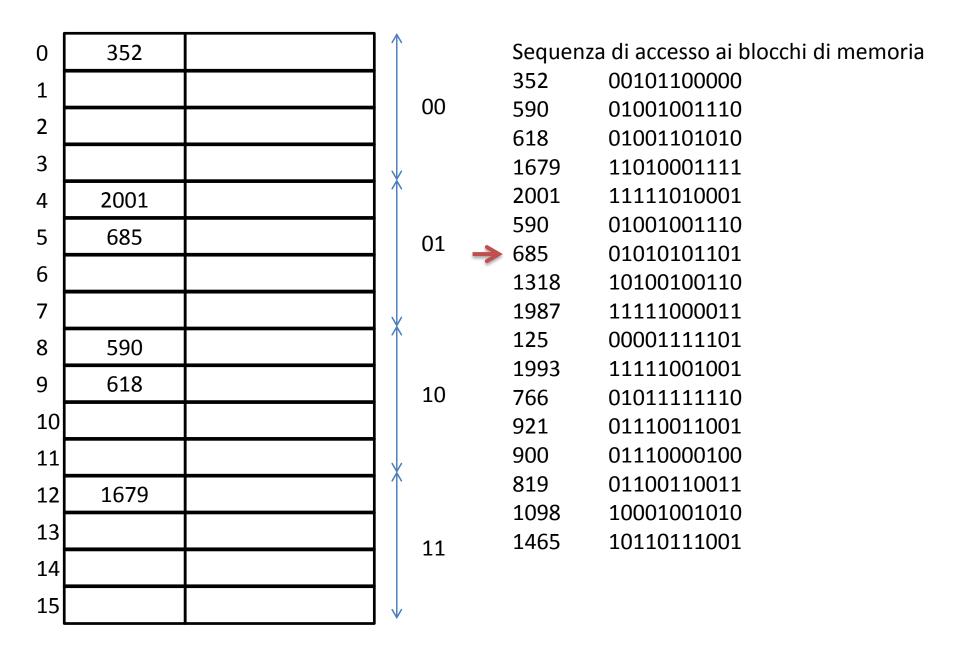

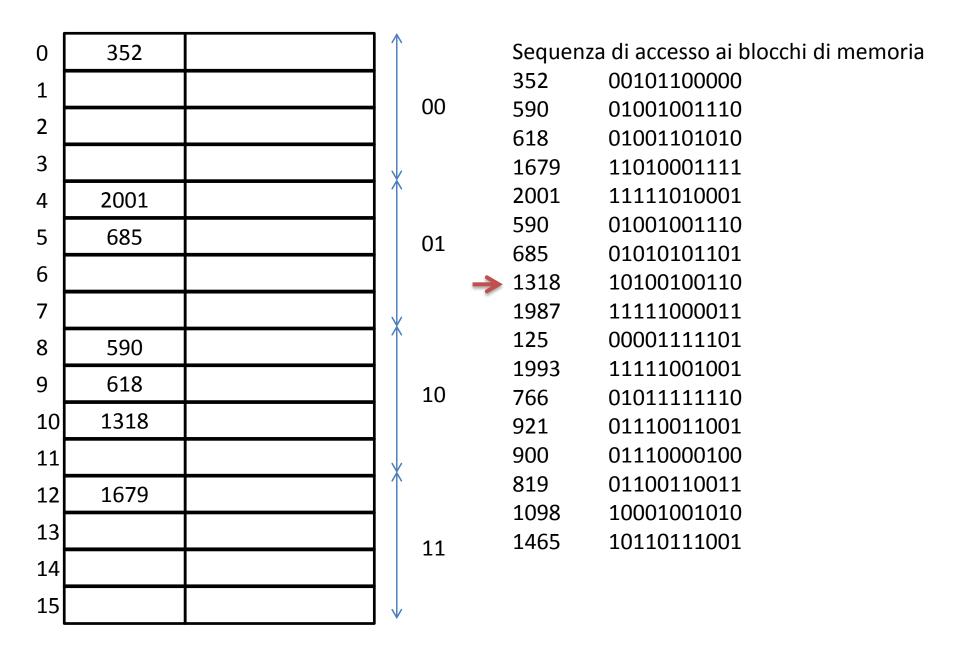

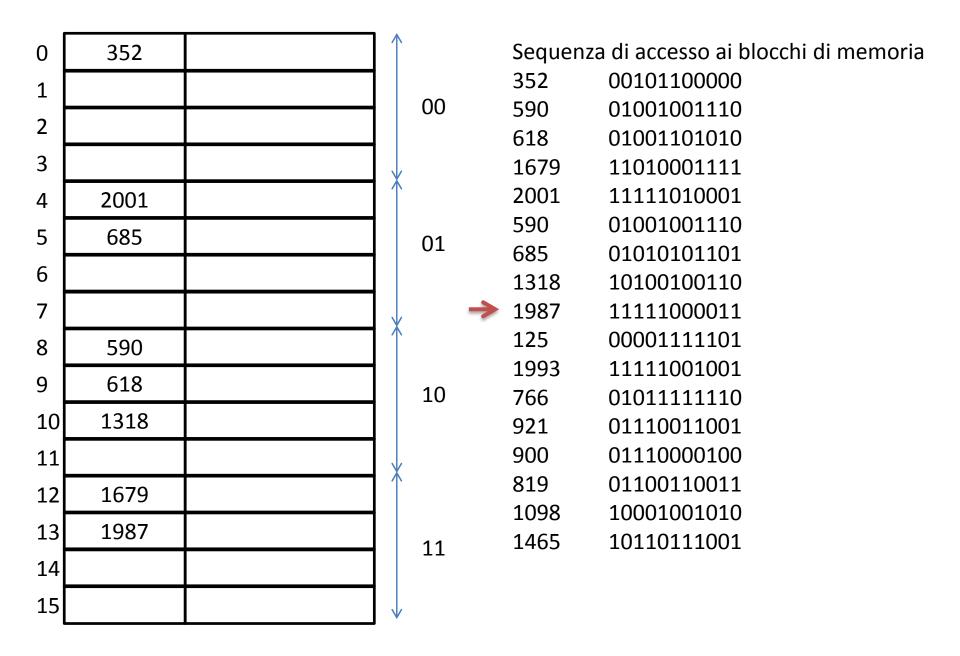

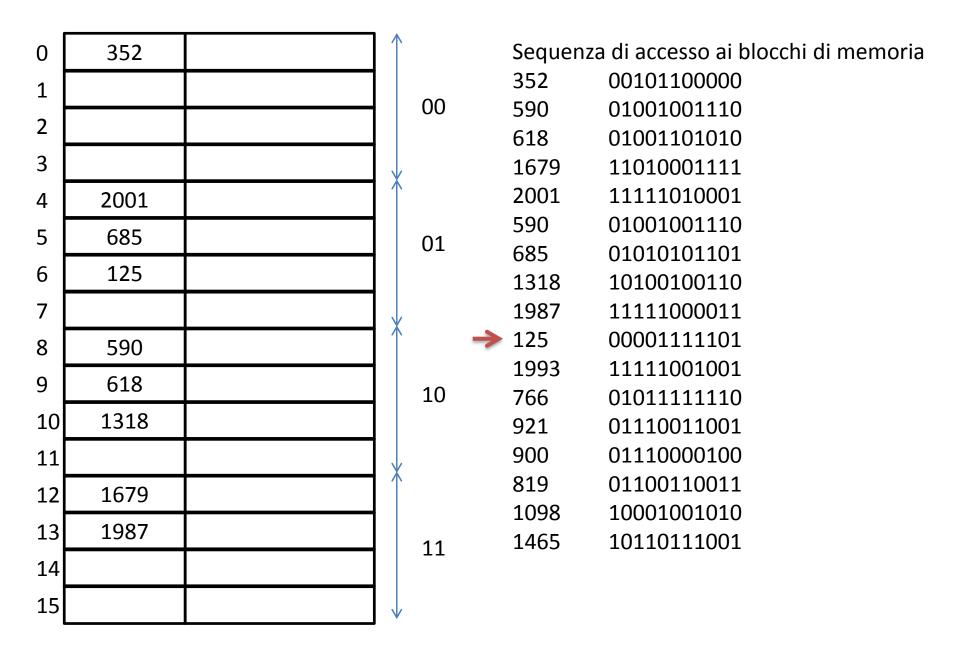

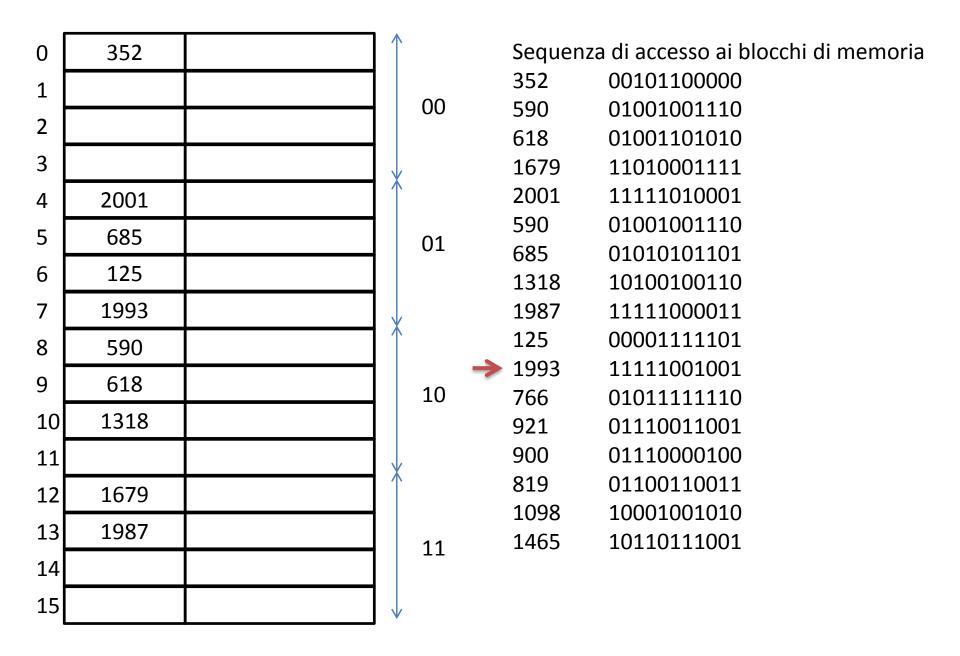

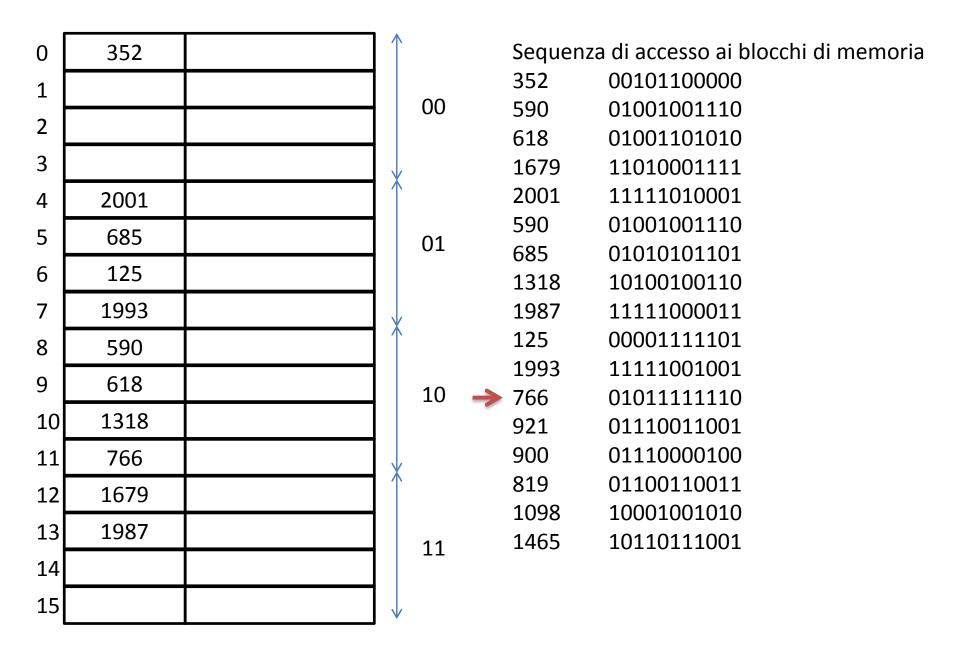

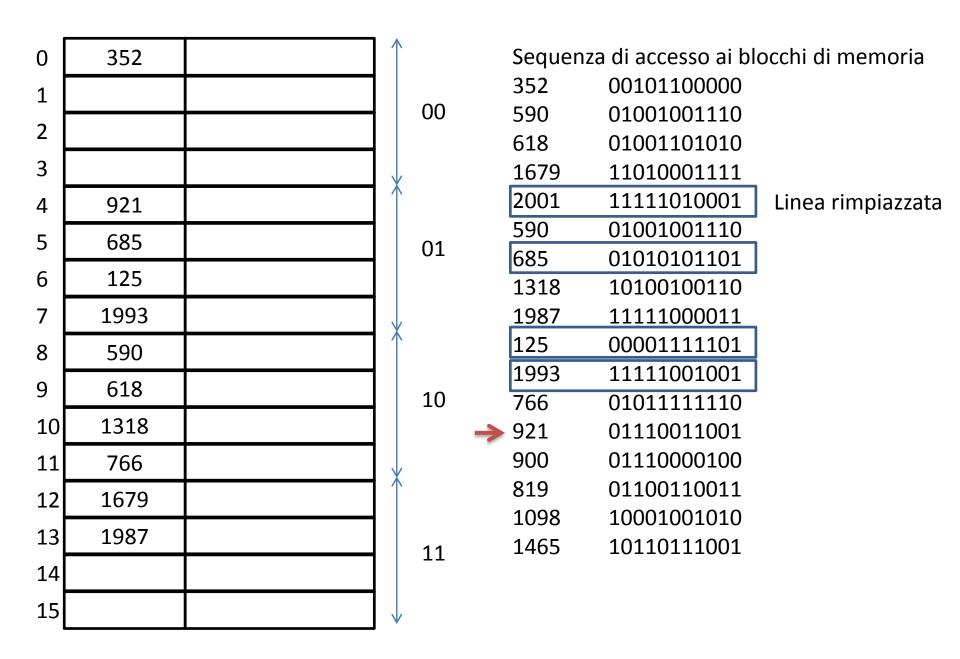

0	352	\uparrow		Sequenz	za di accesso ai blocchi di memoria
1	900			352	00101100000
2	300		00	590	01001001110
				618	01001101010
3		\downarrow		1679	11010001111
4	921	\uparrow		2001	11111010001
5	685		01	590	01001001110
			01	685	01010101101
6	125			1318	10100100110
